

Energy Efficient Buildings

An IREM and RealComm Seminar

Sustainable Technologies That Work!

“Green” without intelligence is not very smart. This seminar brings together industry experts to discuss the latest technologies for reducing energy consumption and carbon emissions in buildings. With the fluctuating price of oil and increasing utility costs, building owners and operators need to incorporate intelligent building initiatives such as automated building systems, daylight harvesting, wireless sensors and controls, renewable sources of energy, and energy management software in order to remain competitive and profitable. Speakers will present new, innovative solutions and case studies for “green” sustainable buildings as well as methods for establishing ROI on these new solutions. This seminar is a “must-attend” for owners, developers, property managers, architects, facility managers, engineers, system integrators and consultants.
